EDUCATION

San Diego State University — *B.S. in Computer Science*

Expected Spring 2029

GPA: 3.74 — *Relevant Classes:* Unix and Linux, Network Security, Advanced Network Traffic Analysis

EXPERIENCE

SDSU Cyber Defence Team — *Competitions Lead*

Sept. 2026 – Present

- Current head of all competitions that the SDSU Cyber Defense Team signs up for and competes in.
- Developed scripts, tools, instructions, and held lectures in regards to the **Collegiate Cyber Defence Competition** and **Collegiate Penetration Testing Competition**.
- Held and competed in countless **Capture The Flag Competitions** for the SDSU Cyber Defence Team.
- Taught members of the team how to approach **complex CTF challenges** including problems based on cryptography, reverse engineering, open source intelligence, digital forensics, and web exploitation.

SDSU - CY 302: Fundamentals of Digital Security — *Teaching Assistant*

Sept. 2026 – Present

- Made and refined lab assignments covering a wide variety of software exploitation techniques
 - Guided students through buffer overflow attacks, NOP sleds, Packet Sniffing, and SQL Injection.
-

ACHIEVEMENTS

- 1st place in Lockheed Martin's CyberQuest 2025.
 - Avid Hackathon participant and winner (devpost.com/DashellF).
 - 2nd place in RITSEC CTF 2026 (663 teams internationally).
 - 3rd place in TAMU CTF 2026 (697 teams internationally).
 - Final 4 in HTB's Hack The Madness 2026 (64 academic teams nationally).
 - 5th place in the National Cyber League Fall 2025 team competition (4214 teams nationally).
 - 6th place in WRCCDC Regional Finals 2026.
 - Regularly participated in CTF competitions weekly for over a year.
-

PROJECTS

Scrapboard — *Trash Detection and Classification App*

- Android/iOS app that uses the camera to detect trash and tell the user which trash bin it goes in.
- Uses an Expo framework with a MongoDB SQL database for credentials and a global scoreboard.
- Backend also includes Ngrok communication and Pytorch implementation.
- 1st place project in Random Forest Hackathon 2025

Space Simulator — *Accurate Simulation of our own Solar System*

- Uses Godot to simulate size, spin, tilt, and orbital velocity of our sun and all planets in our solar system.
- Can be exported as either an Android app or a computer app (Windows or Mac).
- Includes controls to alter speed, date, and includes a rocket trajectory simulator between planets and orbit.

Windows Hardening Script — *A Domain Controller script that secures an entire domain*

- Checks and secures common vulnerabilities in services such as SMB, Prints, and Windows Authentication.
 - Makes backups of important service files including DNS, Web servers, and Active Directory users.
 - Audits and logs all services, ports, and shares running on every machine on the domain.
 - Sends other hardening scripts to every other computer on the domain to also secure local configuration.
-

SKILLS

Technologies: Linux, Windows Server, Git, Proxmox, Apache, MySQL, Expo, React, MongoDB, Ngrok, Godot, GDB, Ghidra, Programming (Python, C, C++, Java, SQL, Bash, Powershell, Javascript/Typescript)

Strengths: Incident Response, Adaptivity to new technologies, Digital Forensics, Presentation, Documentation
